

Conda cheat sheet

 [conda-cheatsheet.md](#)

Typing `conda` from the command line will display a list of all available commands.

Common Conda Commands

- `conda create -n lab python=3.5` -- create a new environment by name `lab` which uses python 3.5
- `conda env update --prune --quiet --name monkey --file environment.yml` -- create or update env from `.yml`

Tips

- `conda env export > environment.yml` -- export an environment for reuse

Housekeeping

- `conda clean -t` -- removes any unextracted tarballs
- `conda clean -p` -- removes any extracted packages that are not currently linked into an environment
- `conda clean -pt` -- perform both actions above

Notes
