devDependencies up to date

A [Visual Studio Code](#) extension to lint [CSS/SCSS/Less](#) with [stylelint](#)

```
✖ stylelint: Unexpected universal selector (selector-no-universal)
  main.css (8,7)

✖ stylelint: Expected single space before "+" operator (function-calc-no-unspaced-operator)
  main.css (8,24)

⚠ stylelint: Unexpected trailing zero(s) (number-no-trailing-zeros)
  main.css (8,28)

⚠ stylelint: Unexpected missing newline at end of file (no-missing-eof-newline)
  main.css (8,33)
```

```
.text * { top: calc(1em+ 2.0em) }
```

Installation

1. Run [Install Extension](#) command from [Command Palette](#).
2. Search and choose `stylelint`.

See the [extension installation guide](#) for details.

Usage

Enable the linter in the VS Code [settings](#), while disabling the built-in CSS and SCSS linter:

```
{
  "stylelint.enable": true,
  "css.validate": false,
  "scss.validate": false
}
```

Configurations

In addition to the VS Code settings mentioned below, you can set the config by adding [stylelint configuration files](#) to the workspace directory.

stylelint.enable

Type: Boolean

Default: true

Control whether [stylelint](#) is enabled for CSS/SCSS/Less files or not.

stylelint.configOverrides

Type: Object

Default: null

Will be directly passed to [configOverrides](#) option.

stylelint.config

Type: Object

Default: null

Will be directly passed to [config](#) option. Note that if you set config option, this plugin ignores all the stylelint configuration files.

This extension will run styleLint great!

Only problem is the documentation is really unclear, I'll add some tips for new people (these should really be under Usage).
