Ravindra's Blog

Let's Secure Everything

Git Cheatsheet

Git is awesome.

GPG

Export GPG Key to Bash

```
echo 'export GPG_TTY=$(tty)' >> ~/.bashrc
```

Prepare Repository

Initialize Repository

```
git init
```

Clone Repository

```
git clone <url> <dir>
```

Configuration

Enable Signing

```
git config --global commit.gpgsign true
```

Use gpg2

```
git config --global gpg.program gpg2
```

List GPG Keys

```
gpg --list-secret-keys --keyid-format LONG

/home/ravindra/.gnupg/pubring.kbx
--------------------------------
sec   rsa4096/CB0F259B96C06BD7 2018-07-09 [SC]
uid                 [ultimate] Ravindra Sisodia <rscipher001@gmail.com>
ssb   rsa4096/80FAD53E2BC58FD2 2018-07-09 [E]

Copy CB0F259B96C06BD7 from output
```

Change Git Config

```
git config --global user.signingkey CB0F259B96C06BD7
```

Force push

```
git push --force
```

Force push (to newly added remote)

```
git push -u origin master --force
```

Undo Everything after last commit

```
git reset HEAD --hard
```

Delete all untracked files

```
git clean -f
```
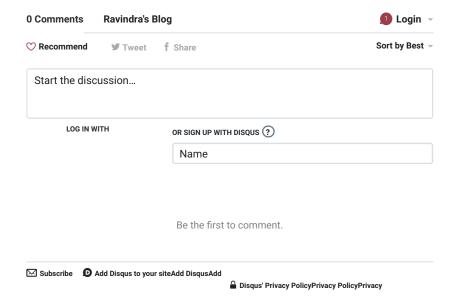

Delete all untracked files and directories

```
git clean -fd
```
