IntelliSense for CSS class names

Zignd | ⬇ 268,424 installs | ★ ★ ★ ★ ★ (73)

Provides CSS class name completion for the HTML class attribute based on the CSS files in your workspace. Also supports React's className attribute.
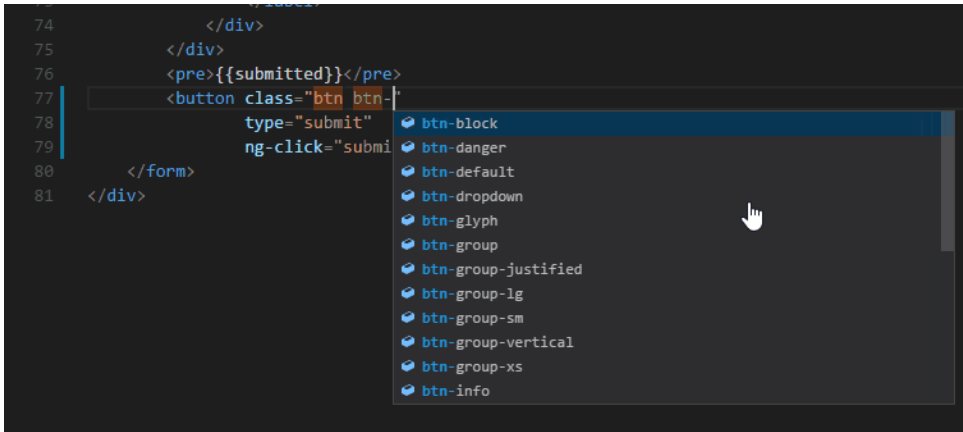

Installation

Launch VS Code Quick Open (⌘+P), paste the following command, and press enter.

```
ext install html-css-class-completion
```
Copy | **More Info**

IntelliSense for CSS class names

A Visual Studio Code extension that provides CSS class name completion for the HTML `class` attribute based on the CSS files in your workspace. Also supports React's `className` attribute.

More Info

Version	1.1.0
Last updated	4/14/2017, 9:50:57 PM
Publisher	Zignd

Features

- Provides class name completion from class definitions found on your current workspace
- Command to manually re-cache the class definitions used on the auto completion
- Supports React's `className` attribute

Features on the backlog

- Cache class definitions from style tags
- Cache class definitions from link tags
- Customization of the directories in which the extension will look for class definitions through User Settings
- Support for PHP, Razor, Jade...

You can request new features on the extension repository on GitHub.

Changelog

1.1.0 (Apr 14, 2017)

- Added support for React's `className` attribute in JavaScript, JavaScript React (.jsx) and TypeScript React files

(.tsx). Thanks to github.com/JanneHarju.
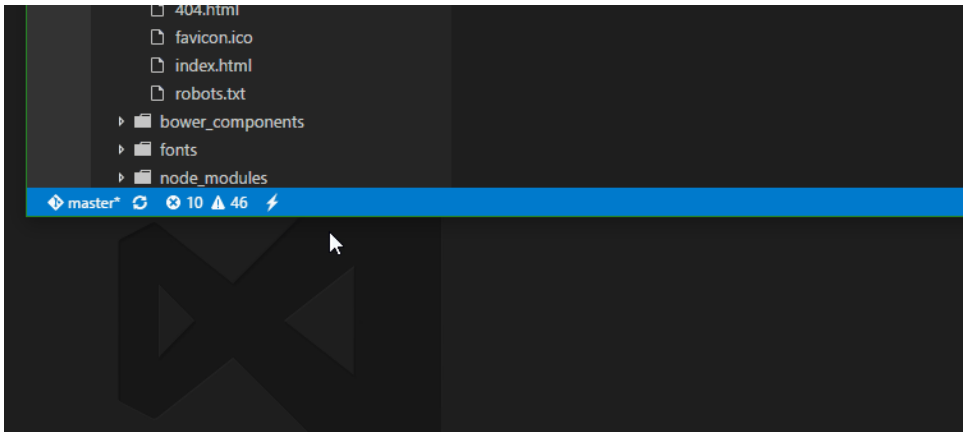

1.0.3 (Sep 27, 2016)

- Fixed error showing up whenever there were no workspace opened

1.0.2 (Sep 17, 2016)

- Refactored to add proper asynchronous parallel parsing of the documents

Usage

If there are HTML files on your workspace the extension automatically starts and look for CSS class definitions. In case new CSS classes are defined or new CSS files are added to the workspace and you also want auto completion for them simply hit the lightning icon you will find on the status bar and execute the command pressing `Ctrl+Shift+P` and then typing "Cache CSS class definitions".

UPDATE: The developer suggested to try ctrl+space, this does work.

The breakage is due to this wonderful new feature in VS Code:

Was working great until 1.11.1 broke it. Hopeful for a fix soon. Would love it to support emmet, then a 5 star plugin.
